About Morningstar Indexes	20

Overview

Designed to facilitate performance benchmarking and efficient portfolio construction, the Morningstar® Global Markets IndexesSM represent the top 97% of the investable global equity market and provide extensive building blocks across geographical regions, developed and emerging markets, individual countries, sectors, and currencies. The indexes are built and maintained according to a transparent set of rules, and only liquid stocks that are readily available to institutional investors are included, ensuring accurate and objective representation of the investment opportunity set for active managers and mitigating transaction costs for passive investors.

These indexes do not incorporate environmental, social, or governance, or ESG, criteria.

Index Inception and Performance Start Date

The index inception dates and performance start dates are listed in Appendix 6.

Index Construction

Methodology Summary

Starting Universe

- Companies are assigned to countries by considering their country of incorporation and country of primary listing
- Eligible share classes of companies listed on major global exchanges in countries classified as developed or emerging markets form the starting universe

Eligibility

- Securities with 10 or more nontrading days in the three months preceding reconstitution, or with less than 10% of their shares publicly floated are excluded
- Securities are ranked by trading volume and turnover within their respective region. Those that rank below the top 75% are ineligible

Portfolio Construction

- Securities are ranked by market cap in descending order size within their respective region, and a cumulative market cap percentage is calculated for each stock
- Breakpoints are determined as follows:
 - large-cap: 70%
 - mid-cap: 90%
 - small-cap: 97%
- Constituents are weighted by float-adjusted market cap
- Semiannual reconstitution, quarterly rebalancing

Morningstar Global
Markets Indexes

Starting Universe

At each reconstitution, the global equity universe is defined based on the criteria for the U.S. and global ex-U.S. universe. For more details, refer to the construction rules for the [Morningstar US Market](#) and [Morningstar Global Markets ex-US](#) indexes (derived indexes).

Eligibility

To be eligible for inclusion in the Morningstar Global Markets Indexes, all constituents must meet the following criteria:

- trading frequency
- dollar trading volume and turnover
- free-float market-capitalization requirements.

Each security that meets these general criteria forms the investable universe and is further screened by market capitalization for potential inclusion in one of three economic segment indexes: U.S., developed ex-U.S., or emerging. The country classification process determines membership in the appropriate index. Each security that passes all the screens will be assigned one of the following capitalization bands: large-, mid-, or small-. For more details on the criteria, country classification, and capitalization bands, refer to the construction rules of the derived indexes.

More granular, regional, country, and size segment indexes are derived from the constituents of the Morningstar Global Markets Index.

Portfolio Construction

Calculating the Economic Segment-Level Capitalization Breakpoints

For each economic segment (U.S., developed ex-U.S., and emerging), the companies are ordered by market capitalization in descending order. Next, the cumulative market-capitalization percentage is calculated for each stock within its economic segment. The market capitalization of the largest stock whose cumulative market-capitalization percentage is greater than the following percentages is taken as the capitalization breakpoint for that capitalization band.

- Large-cap: 70%
- Mid-cap: 90%
- Small-cap: 97%

There are buffers around these targets, which differ for the U.S. and ex-U.S. regions. For further details, refer to the construction rules for the derived indexes.

Number of Stocks

The number of stocks in the indexes is variable, subject to the selection and eligibility criteria at the time of reconstitution.

Index Weighting

The indexes are float market capitalization weighted. For more details, refer to the [Morningstar Indexes Calculation Methodology rulebook](#).

Index Maintenance and Calculation

Scheduled Maintenance

The indexes are reconstituted, where the membership is reset, semi-annually on the third Friday of June and December. Adjustments are implemented after Friday's market close and reflected the following Monday. If Monday is an index holiday, reconstitution is reflected the next business day. The market data used for reconstitution is as of the last trading day of April and October.

The indexes are rebalanced quarterly on the third Friday of March, June, September, and December. Adjustments are implemented after Friday's market close and reflected the following Monday. If Monday is an index holiday, the rebalance is reflected the next business day. The market data used for rebalancing is described in the [Free Float Calculation Methodology](#).

Refer to Appendix 2 for details on reconstitution and rebalancing.

Corporate Actions

The treatment of corporate actions will be as per the float market-capitalization-weighted indexes. For more details, please refer to the [Morningstar Indexes Corporate Actions Methodology rulebook](#).

Index Calculation and Price Data

Details about index calculations and price data can be found in their respective rulebooks: [Morningstar Indexes Calculation Methodology](#) and [Equity Closing Prices Used for Index Calculation](#).

Methodology Review and Index Cessation Policy

The index methodology is continually reviewed to ensure it achieves all stated objectives. These reviews consider corporate action treatment, selection, and maintenance procedures. Subscribers to the index will be notified before any methodology changes are made. For more details, refer to the [Morningstar Index Methodology Change Policy](#).

Morningstar Indexes notifies all subscribers and stakeholders of the index that circumstances might arise that require a material change to, or a possible cessation of, the index. These circumstances are generally not within Morningstar's control and may include significant changes to the underlying market structure, inadequate access to necessary data, geo-political events, and regulatory changes. In addition, factors such as low usage or methodology convergence may result in the cessation of an index.

Because the cessation of the index or benchmark index could disrupt subscriber products that reference this index, all subscribers are encouraged to have robust fallback procedures if an index is terminated. For more details, refer to the [Morningstar Index Cessation Process](#).

Data Correction and Precision

Intraday Index Data Corrections

Commercially reasonable efforts are made to ensure the accuracy of data used in real-time index calculations. If incorrect price or corporate action data affects index daily highs or lows, it is corrected retroactively as soon as is feasible.

Index-Related Data and Divisor Corrections

Incorrect pricing and corporate action data for individual issues in the database will be corrected upon detection. In addition, an incorrect divisor of an index, if discovered within two days of its occurrence, will always be fixed retroactively on the day it is discovered to prevent an error from being carried forward. Commercially reasonable efforts are made to correct an older error subject to its significance and feasibility.

For more details, refer to the [Recalculation Guidelines](#).

Exceptions

While Morningstar will seek to apply the method described above, the market environment, supervisory, legal, financial, or tax reasons may require an alternative approach to be adopted. A decision to take an alternative approach will be made by the relevant Morningstar Indexes Methodology Committee, and in all instances, the application of a nonstandard process will be reported to the Morningstar Indexes Oversight Committee.

Appendixes

Appendix 1: Modifications to the Rulebook

Section	Description of Change	Update Date
Entire rulebook	Moved to new template	November 2022
Overview	Revised index description	November 2022
Exhibit 1	Revised exhibit	November 2022
Exceptions	Added Exceptions section	February 2023
Appendix 5	Updated the eligible market segments for Japan	June 2023
Data Correction and Precision	Computational and Reporting Precision section removed	September 2024

Appendix 2: Glossary

Terms	Description
Reconstitution	<p>Each reconstitution involves the following:</p> <ul style="list-style-type: none"> • updating the global market's investable equity universe. • reviewing the economic segment- and country-level size segment breakpoints • assigning companies to capitalization bands considering the buffer zones • changes in index shares (free float, total shares outstanding, index-specific adjustment factor) of each constituent.
Rebalance	<p>Each rebalancing involves the following:</p> <ul style="list-style-type: none"> • changes in index shares (free float, total shares outstanding, index-specific adjustment factor) of each constituent • addition of U.S. spin-offs/IPOs to the global markets index
World Bank Country Classification	<p>For operational and analytical purposes, the World Bank's main criterion for classifying economies is gross national income per capita. The bank's analytical income categories (low, middle, and high) are based on the bank's operational lending categories (civil works preferences, International Development Association eligibility, and so on). These operational guidelines were established decades ago, based on the view that since poorer countries deserve better conditions from the bank, comparative estimates of economic capacity needed to be established. GNI, a broad measure, was considered to be the best single indicator of economic capacity and progress; at the same time, it was recognized that GNI does not, by itself, constitute or measure welfare or success in development. GNI per capita is therefore the bank's main criterion of classifying countries.</p> <p>Source: World Bank</p>

Country Market Capitalization and Country Market Capitalization/GDP Ratio	The size of a country's equity markets should be material, or above \$5 billion. The market should exhibit financial depth; that is, the ratio of the size of the country's equity markets to its gross domestic product should be high. Countries that fall in the bottom 20% are removed from index eligibility.
Additional Country Inclusion Criteria	<p>The following criteria are considered when determining country eligibility:</p> <ul style="list-style-type: none"> • The country's allowance of foreign investors to easily enter and exit the market, as well as to repatriate capital and dividends. • Timely and accurate availability of real-time and historical market data. • The level of interest attracted by the market from international investors.

Appendix 3: Developed- and Emerging-Market Classification

Countries are classified as developed if they meet all the following criteria:

- Annual per capita GNI falls in the high-income category, as defined by the World Bank, for the most recent three consecutive years. As of 2014, the World Bank defines countries with per capita GNI in excess of \$12,736 as high income.
- The country must not have in place any broad-based discriminatory controls against nondomiciled investors for the most recent three years.
- The country's stock markets must exhibit these characteristics:
 - transparency
 - market regulation
 - operational efficiency
 - absence of broad-based investment restrictions.

Countries that do not meet all of the above criteria fall into the emerging-markets economic segment. For example, a country may be classified as high income by the World Bank, but because of a lack of transparency within local markets, it falls into the emerging-markets economic segment.

Classification	Country	Classification	Country

1 - Transatlantic indexes cover European and U.S. equity markets.

2 – This is a Large-Mid Cap Index covering the US, Developed Europe and Developed Asia Pacific in a 50%, 35% and 15% split respectively.

About Morningstar Indexes

Morningstar Indexes was built to keep up with the evolving needs of investors—and to be a leading-edge advocate for them. Our rich heritage as a transparent, investor-focused leader in data and research uniquely equips us to support individuals, institutions, wealth managers and advisors in navigating investment opportunities across major asset classes, styles and strategies. From traditional benchmarks and unique IP-driven indexes to index design, calculation and distribution services, our solutions span an investment landscape as diverse as investors themselves.

Morningstar Indexes Methodology Committee

The Morningstar Indexes Methodology Committee oversees all new indexes development, index methodology changes, and cessation of indexes for any indexes where Morningstar owns the Intellectual Property. This committee is also charged with ensuring that indexes align with Morningstar Research principles and values. The group is comprised of members of the index team with index research, product development, product management, client service, index implementation and operation expertise who provide the first layer of governance over index design and methodology.

Morningstar Indexes Operations Committee

The Morningstar Indexes Operations Committee governs the processes, systems and exception handling of the day-to-day management of all live indexes, including index rebalancing and reconstitution, restatements, market classification and contingency management. The committee oversees the annual review of index methodology (as required by UK & EU Benchmark Regulations “BMR”), ensuring methodologies remain fit for purpose and continue to achieve their stated investment objectives. The group is comprised of members of the index team with data, operations, corporate actions, product development, index launch, client service and index management experience who provide the first layer of governance over index operations.

Morningstar Indexes Oversight Committee

The Morningstar Indexes Oversight Committee is responsible for the index oversight function as per the requirements of the UK & European BMR—providing independent oversight of all aspects of the governance of benchmark administration as required by the relevant BMR. Its remit extends to all calculation and administration-related business activities of Morningstar Indexes including administration of Morningstar-owned benchmarks as well as client-owned benchmarks and index calculation. The oversight function is part of the organizational structure of Morningstar but is separate and independent from the Index business, Index Management and the other Index Committees.
