Investing in transformational technologies possesses inherent appeal. Companies like Alphabet, Amazon, and Meta have changed the way we work and live, reaping healthy profits and delivering attractive returns to investors along the way. Companies with significant exposure to innovative technologies can disrupt industries, create new markets, and enjoy strong growth, which can make them attractive investments.

The Morningstar Asia Exponential Technologies Index is designed to deliver diversified exposure to 50 companies from the Morningstar Asia Index poised to benefit from innovative technologies with exponential growth potential. It offers unparalleled exposure to nine key technology themes by drawing on the in-depth experience and forward-looking insights of Morningstar's equity research team.

Exponential technology themes

The Morningstar Equity Research Team's Exponential Technology steering committee has identified nine key themes. Themes are reviewed annually and can evolve as new themes emerge.

- **Big Data & Analytics:** Capabilities with data sets too large and complex to manipulate or interrogate with standard methods or tools. Sub-themes include Artificial Intelligence & Machine Learning and Bioinformatics
- **Cloud Computing:** A paradigm shift from the legacy IT model whereby each element is accessed in a scalable, on-demand manner through the internet. Sub-themes include Infrastructure as a Service (IaaS) & Platform as a Service (PaaS) as well as Software as a Service (SaaS).
- **Energy Transition:** The quest to abate global climate change and reduce greenhouse gases has led to a surge of new energy technologies, investment, and innovation. Sub-themes include Carbon Capture Technologies, Energy Storage, Hydrogen, and Renewable Energy.
- **Fintech Innovation:** The integration of technology and financial services. In some cases, traditional financial services companies are simply expanding their offerings with innovative, technology-enabled services to meet consumer preferences. In other cases, companies are building new

platforms that could potentially transform the industry or create new industries within the financial sector.

- **Healthcare Innovation:** New therapies and technologies that address unmet medical needs that can significantly improve human health prospects. This trend focuses on novel solutions that are revolutionary in nature, rather than evolutionary, to enhance and repair the body. Sub-themes include Innovative Devices & Diagnostics and Innovative Therapies.
- **Hyperconnectivity:** This theme fuels rapid growth in connected devices and voracious need to push more data at faster transmission rates between users and devices. Sub-themes include 5G Connectivity, Cybersecurity, Internet of Things (IoT), and Non-Cellular Connectivity.
- **Nanotechnology:** The branch of technology that deals with dimensions and tolerances of less than 100 nanometers, especially the manipulation of individual atoms and molecules. Significant research dollars are being spent with the goal of starting with atoms and building up, to further progress in miniaturization. There are a wide range of potential applications. Examples include medicine, computing, industrial manufacturing, and travel (ground, air, space).
- **Next Gen Transportation:** Technologies replacing traditional human-operated, internal combustion engine-based vehicles. This includes a wide variety of applications. Examples include traditional light vehicles, public transportation vehicles, scooters/bikes, and drones. Sub-themes include Autonomous Driving Technologies and Electric Vehicles
- **Robotics:** The branch of technology that deals with the design, construction, operation, and application of robots. Advances in robotics have seemingly infinite potential applications, spanning technology, industrial, medical, and consumer-facing channels.

Theme exposure scores

Through a thorough, standardized scoring process conducted by Morningstar Equity Analysts, companies are assigned thematic exposure scores for each theme. Forward-looking insights are used to assign scores of 0, 1, 2, 3 or 4 with higher scores representing a higher degree of thematic purity. These scores are driven by each company's role in the supply chain, expected revenue exposure to the sub-theme

five years in the future, and whether the company is expected to experience a net profit increase from its exposure to the theme over the next five years. The steering committee provides oversight and ensures consistency.

Index eligibility and portfolio construction

The constituents of the Morningstar Asia Exponential Technologies Index are derived from the Morningstar Asia Index. To be eligible for inclusion in the Index, each company must receive a score of 1 or higher in at least one of the targeted themes. Securities with average three-month trailing daily trading volume less than \$5 million or float market capitalization of \$300 million or less are ineligible, with relaxed requirements for current index constituents. Qualifying potential constituents are ranked to emphasize exposure to exponential technology themes.

The ranking criteria are given below in descending order of absolute preference:

- Number of themes in which a constituent scores 4
- Number of themes in which a constituent scores 3
- Number of themes in which a constituent scores 2
- Number of themes in which a constituent scores 1
- Current index constituents are given preference
- Company total market capitalization, preferring smaller over larger

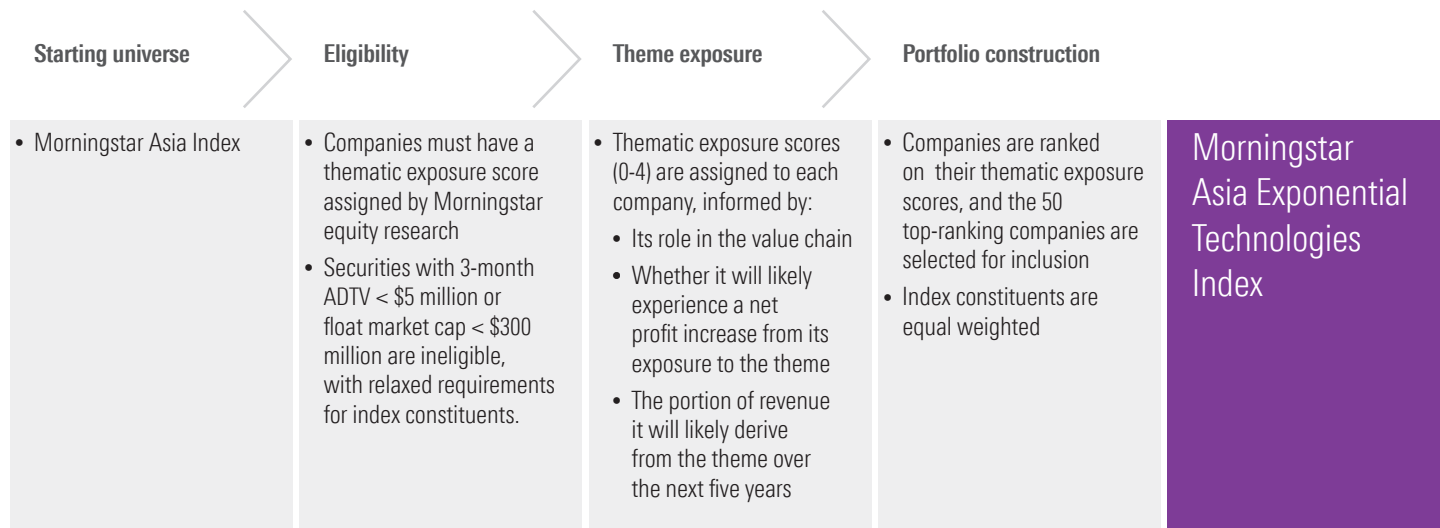

Companies ranked in the top 50 are selected for the index.¹

Rebalancing and reconstitution

The Morningstar Asia Exponential Technologies Index is reconstituted and rebalanced annually in December.
