About Morningstar Indexes10

Overview

The Morningstar Single Theme Upstream Natural Resources Indexes are designed to provide exposure to stocks involved in the upstream portion of the natural resources supply chain in one of the following categories: agriculture, energy, precious or industrial metals, timber, and water. These classifications are defined by the Morningstar Global Equity Classification Structure (GECS).

The indexes do not incorporate environmental, social, or governance criteria.

Index Inception and Performance Start Date

The index inception date is May 8, 2024, and the performance start date, when the first back-tested index value was calculated, is December 15, 2000.

Index Construction

Methodology Summary

Starting Universe

- Morningstar Global Markets Index

Eligibility

- Stocks must be assigned to a GECS industry associated with the targeted natural resources theme: energy, metals, agriculture, timber, or water.
- Minimum ADTV of \$1 million
- Minimum float market cap of \$1 billion (\$500 for water and timber)

Portfolio Construction

- Tilted Float Market Capitalization weighted with 5-10-40 security capping
- Jun & Dec Reconstitution with quarterly rebalancing

Morningstar Single Theme Upstream Natural Resources Indexes

Starting Universe

At each reconstitution, constituents of the Morningstar Single Theme Upstream Natural Resources Indexes are derived from the Morningstar Global Markets Index (benchmark). For more details on benchmark construction, refer to the construction rules for the [Morningstar Global Markets Indexes](#).

Eligibility

To be eligible for inclusion in each index, all securities must meet the following criteria:

- The company must be assigned to one of the industries mapped to the natural resources category the index targets: energy, metals, agriculture, timber, or water. Each index only targets one category. The Morningstar industry classification determines membership in the appropriate resource category, as shown in Appendix 3. For more details on Morningstar's industry classification system, refer to the Morningstar Global Equity Classification Structure.
- The security must have an average daily traded value (three-month) of at least \$1 million.
- Securities in energy, metals, or agriculture resource category must have a minimum float market capitalization of \$1 billion. Securities in timber and water categories must have a minimum float market capitalization of \$500 million.

Portfolio Construction

All eligible securities are targeted for inclusion in each index.

Number of Stocks

The number of stocks in the index is variable, subject to the size of the starting universe and the application of eligibility criteria at the time of reconstitution.

Index Weighting

The indexes apply tilt weighting from float market capitalization to overweight companies from higher priority industries, subject to 5-10-40 capping constraints. Each index company is assigned a tilt of 1, 2 and 3 as per the respective priority of 3, 2 and 1 of the GECS Industry to which they belong. The priority of each GECS industry is outlined in Appendix 3. The weightings are capped such that a single company cannot have a weight greater than 10% and the sum of all company weights greater than or equal to 5% cannot exceed 40%. In the event of a breach of this cap, companies above the cap are downweighted to bring the portfolio into compliance. The excess weight from these capped stocks is redistributed across the portfolio in a manner designed to preserve the relative exposure of the pre-capped weights for as many companies as possible. This may result in some companies that initially breached the cap receiving a lower weight than the cap.¹

For more details, refer to the [Morningstar Indexes Calculation Methodology rulebook](#).

¹ Prior to December 22, 2025, this cap was applied at the security level, from this date on, capping is applied at the company level.

Index Maintenance and Calculation

Reconstitution and Rebalancing

The index is reconstituted, where the membership is reset, semi-annually on the third Friday of June and December. Adjustments are implemented after Friday's market close and reflected the following Monday. If Monday is an index holiday, reconstitution is reflected the next business day. The market data used for reconstitution is as of the last trading day of April and October.

The index is rebalanced quarterly on the third Friday of March, June, September, and December. Adjustments are implemented after Friday's market close and reflected the following Monday. If Monday is an index holiday, the rebalance is reflected the next business day. The market data used for rebalancing is as of the last trading day of February, May, August, and November. During each quarterly rebalance the parent index membership is checked, and the weights of the constituents are reweighted according to the stated weighting scheme using updated float market capitalization data but using the tilt factors from the previous reconstitution.

Index files are published according to the global calendar schedule. For more information, please refer to the [Morningstar Indexes Holiday Calendar](#).

Corporate Actions

The treatment of corporate actions will be as per the float-adjusted market capitalization-weighted indexes corporate action methodology. For more details, please refer to the [Morningstar Indexes Corporate Actions Methodology rulebook](#)

Index Calculation and Price Data

Details about index calculations and price data can be found in their respective rulebooks: [Morningstar Indexes Calculation Methodology](#) and [Equity Closing Prices Used for Index Calculation](#).

Methodology Review and Index Decommissioning Policy

The index methodology is continually reviewed to ensure it achieves all stated objectives. These reviews consider corporate action treatment, selection, and maintenance procedures. Subscribers to the index will be notified before any methodology changes are made. For more details, refer to the [Morningstar Index Methodology Change Policy](#).

Morningstar Indexes notifies all subscribers and stakeholders of the index that circumstances might arise that require a material change to, or a possible cessation of, the index. These circumstances are generally not within Morningstar's control and may include significant changes to the underlying market structure, inadequate access to necessary data, geo-political events, and regulatory changes. In addition, factors such as low usage or methodology convergence may result in the cessation of an index.

Because the cessation of the index or benchmark index could disrupt subscriber products that reference this index, all subscribers are encouraged to have robust fallback procedures if an index is terminated. For more details, refer to the [Morningstar Index Decommissioning Policy](#).

Data Correction and Precision

Intraday Index Data Corrections

Commercially reasonable efforts are made to ensure the accuracy of data used in real-time index calculations. If incorrect price or corporate action data affects index calculations, corrections are applied prospectively.

Index-Related Data and Divisor Corrections

Incorrect pricing and corporate action data for individual issues in the database will be corrected upon detection. In addition, an incorrect divisor of an index, if discovered if discovered within two days of its occurrence will be fixed retroactively on the day it is discovered to prevent an error from being carried forward. Commercially reasonable efforts are made to correct an older error subject to its significance and feasibility.

For more details, refer to the [Recalculation Guidelines](#).

Exceptions

While Morningstar will seek to apply the methodology as described within this document, the market environment, supervisory, legal, financial, or tax reasons may require an alternative approach to be adopted. A decision to take an alternative approach will be made by the Morningstar Index Methodology Committee, and in all instances, the application of a nonstandard process will be reported to the Morningstar Index Oversight Committee.

Appendixes

Appendix 1: Modifications to the Rulebook

Section	Description of Change	Update Date
Data Correction and Precision	Computational and Reporting Precision Section removed	June 2025
Index Weighting	Capping rules updated to apply at the company level, rather than the security level, from December 22, 2025, on.	November 2025

Appendix 2: Glossary

Terms	Description
Reconstitution	During each reconstitution, the steps mentioned in the index construction process are performed, resulting in membership reset.
Rebalance	During each rebalancing, the weights are adjusted for updated free-float and shares outstanding data.

Appendix 3: Eligible Industries and Priority Rank for Weighting

Resource Category	Industry Code (>= Dec19)	Industry Name (>= Dec19)	Priority (>= Dec19)	Industry Code (< Dec19)	Industry Name (< Dec19)	Priority (< Dec19)
Energy	30910020	Oil & Gas E&P	1	30947102	Oil & Gas E&P	1

Timber	10140010	Lumber & Wood Production	1	10105006	Lumber & Wood Production	1
	10140020	Paper & Paper Products	2	10105007	Paper & Paper Products	2
	10420090	REIT—Diversified	3	10428064	REIT - Diversified	3
	10420080	REIT—Specialty*	1	-	-	-
Water	20720040	Utilities—Diversified	3	20744095	Utilities - Diversified	3
	20720010	Utilities—Regulated Water	1	20744098	Utilities - Regulated Water	1
	31090010	Waste Management	2	31064129	Waste Management	2

* Only those Specialty REITs whose main line of business is associated with Lumber & Wood Production will be considered eligible for selection

About Morningstar Indexes

Morningstar Indexes was built to keep up with the evolving needs of investors—and to be a leading-edge advocate for them. Our rich heritage as a transparent, investor-focused leader in data and research uniquely equips us to support individuals, institutions, wealth managers, and advisors in navigating investment opportunities across major asset classes, styles, and strategies. From traditional benchmarks and unique IP-driven indexes to index design, calculation, and distribution services, our solutions span an investment landscape as diverse as investors themselves.

Morningstar Index Methodology Committee

The Morningstar Index Methodology Committee oversees all new index development, index methodology changes, and cessation of indexes for any indexes where Morningstar owns the intellectual property. This committee is also charged with ensuring that indexes align with Morningstar Research principles and values. The group comprises members of the index team with index research, product development, product management, client service, index implementation, and operation expertise who provide the first layer of governance over index design and methodology.

Morningstar Index Operations Committee

The Morningstar Index Operations Committee governs the processes, systems, and exception handling of the day-to-day management of all live indexes, including index rebalancing and reconstitution, restatements, market classification, and contingency management. The committee oversees the annual review of index methodology (as required by EU benchmark regulations, or BMR), ensuring that methodologies remain fit for purpose and continue to achieve their stated investment objectives. The group comprises members of the index team with data, operations, corporate actions, product development, index launch, client service, and index management experience who provide the first layer of governance over index operations.

Morningstar Index Oversight Committee

The Morningstar Index Oversight Committee is responsible for the index oversight function as per the requirements of the European BMR, providing independent oversight of all aspects of the governance of benchmark administration as required by the relevant BMR. Its remit extends to all calculation and administration-related business activities of Morningstar Indexes, including administration of Morningstar-owned benchmarks as well as client-owned benchmarks and index calculation. The oversight function is part of the organizational structure of Morningstar but is separate and independent from the index business, index management, and the other index committees.
