About Morningstar Indexes7

Overview

The Morningstar Multi-Asset High Income 10% Capped Index is a broadly diversified index that seeks to deliver a high level of current income while maintaining long-term capital appreciation. The index consists of a comprehensive set of exchange-traded funds (ETFs) that collectively target equity, fixed income, and alternative asset classes. The asset allocation provides an optimal portfolio of equity, fixed income, and cash and is driven Morningstar Investment Management's asset-allocation methodology.

This index does not incorporate environmental, social, or governance criteria.

Index Inception and Performance Start Date

The index inception date is April 6, 2018, and the performance start date, when the first back-tested index value was calculated, is May 21, 2010.

Index Construction

Methodology Summary

Starting Universe

- ETFs sponsored by BlackRock iShares that are listed on a US Exchange

Fund Selection

- Trading history > one year
- AUM ≥ \$250 million
- Must have a history of dividend payment
- Minimum liquidity
 - 3-month avg vol > 25k shares/day
 - Must have no more than 10 non-trading days in the previous quarter

Portfolio Construction

- Asset class exposure set to the following to balance risk exposure:
 - Equity: 20%
 - Fixed Income: 60%
 - Alternatives: 20%
- No constituent can have a weight greater than 10%

Morningstar Multi-Asset High Income 10% Capped Index

Assigning ETFs to the Index

Starting Universe

At each reconstitution, securities for the Morningstar Multi-Asset High Income 10% Capped Index are derived from US listed ETFs with fund sponsor, iShares, a subsidiary of BlackRock Inc. The ETFs classified in the following asset and sub asset classes and listed on a US exchange are considered eligible for inclusion in the index:

- Equity
 - US style and size
 - International style and size
 - Emerging markets

- Dividend focused
 - Global infrastructure
- Fixed Income
 - Broad market
 - Credit
 - Government (US and non-US)
 - Mortgages
 - International
- Alternative
 - Preferred
 - REITs

Fund Selection

To be eligible for inclusion in the index, all constituents must meet the following criteria:

- ETFs must have at least one year of trading history
- ETFs must have at least \$250 million in assets under management
- ETFs must have a history of dividend payment
- ETFs must have a 3-month average trading volume greater than 25,000 shares per day
- ETFs with more than 10 non-trading days in the previous quarter are excluded

To avoid redundancy in categories where there are multiple ETF choices available, the fund with the broadest exposure and sufficient liquidity is selected.

The following ETF categories are not eligible:

- Country specific
- Sector specific
- Industry specific
- Commodity
- Managed futures
- Municipal bonds
- Inflation-linked strategies
- Allocation funds (ETF fund of funds or target date/ risk)
- Bank loans
- Convertible bonds
- Master limited partnerships

Number of Funds

The number of ETFs in the index is subject to the selection and eligibility criteria at the time of reconstitution.

Index Weighting

To maintain broad exposure and diversification, the index will maintain a weight allocation at each rebalance of:

- Equity: 20%
- Fixed Income: 60%
- Alternatives: 20%

No more than 25% of assets can be invested in funds that have significant non-US currency exposure.

Portfolio Weight Calculation

Securities that meet the investable universe standards are selected and assigned a weight according to a variant of the mean-variance optimization equation developed by Morningstar Investment Management. The equation creates an optimal portfolio based on the return, standard deviation, correlation, and yield of the eligible securities. The weight of each constituent of the portfolio is given by maximizing:

$$\max f(w) = \lambda w'y - \sqrt{w'Vw}$$

Where:

w	=	index weight
y	=	12-month yield for equities and current yield-to-maturity for fixed income (less management fees)
V	=	variance-covariance matrix of last 36 months of total market returns
λ	=	Optimizer scale factor set to 0.39

As noted above, covariance used in the optimizer are calculated using the past 36 months of total returns. When the number of return periods is less than the number of assets (as is the case for this index) there may be occasions where a covariance matrix may not work well in an optimization. For this reason, we shrink the covariance matrix partially towards zero using a blend of 75% of the full correlation and 25% zero.

Maximum allocations to each constituent are capped according to the following AUM-based schedule:

- \$250 million ≤ AUM < \$500 million = 5% maximum allocation
- \$500 million ≤ AUM = 10% maximum allocation
- Aggregate high yield bond exposure is capped at 10%

Index Maintenance and Calculation

Scheduled Maintenance

Quarterly Reconstitution and Rebalance

The index is reconstituted and rebalanced quarterly and is implemented after the close of business on the last business day of February, May, August and November and is effective the following business day. The market data used for reconstitution and rebalance is as of previous month end.

Index files are published according to the US calendar schedule. For more information, please refer to the [Morningstar Indexes Holiday Calendar](#).

Index Calculation and Price Data

Details about index calculations can be found in the Return Calculations section of the [Morningstar Indexes Calculation Methodology](#). Price data can be found in the [Indexes Price Methodology](#).

Delisting

If the constituent is delisted by its principal exchange the ETF is removed from the index and is not replaced in between rebalancing periods. Exceptions are made on a case-by-case basis.

Change of Principal Exchange

A security is removed from the index if its principal exchange ceases to be in the US.

Methodology Review and Index Decommissioning Policy

The index methodology is continually reviewed to ensure it achieves all stated objectives. These reviews consider corporate action treatment, eligibility requirements, and maintenance procedures. Subscribers to the index will be notified before any methodology changes are made. For more details, refer to the [Morningstar Index Methodology Change Policy](#).

Morningstar Indexes notifies all subscribers and stakeholders of the index that circumstances might arise that require a material change to, or a possible cessation of, the index. These circumstances are generally not within Morningstar's control and may include significant changes to the underlying market structure, inadequate access to necessary data, geo-political events, and regulatory changes. In addition, factors such as low usage or methodology convergence may result in the cessation of an index.

Because the cessation of the index or benchmark index could disrupt subscriber products that reference this index, all subscribers are encouraged to have robust fallback procedures if an index is terminated. For more details, refer to the [Morningstar Index Decommissioning Policy](#).

Data Correction and Precision

Intraday Index Data Corrections

Commercially reasonable efforts are made to ensure the accuracy of data used in real-time index calculations. If incorrect price or corporate action data affects index calculations, corrections are applied prospectively.

Index-Related Data and Divisor Corrections

Incorrect pricing and corporate action data for individual issues in the database will be corrected upon detection. In addition, an incorrect divisor of an index, if discovered if discovered within two days of its occurrence will be fixed retroactively on the day it is discovered to prevent an error from being carried forward. Commercially reasonable efforts are made to correct an older error subject to its significance and feasibility.

For more details, refer to the [Recalculation Guidelines](#).

Exceptions

While Morningstar will seek to apply the methodology as described within this document, the market environment, supervisory, legal, financial, or tax reasons may require an alternative approach to be adopted. A decision to take an alternative approach will be made by the Morningstar Index Methodology Committee, and in all instances, the application of a nonstandard process will be reported to the Morningstar Index Oversight Committee.

Appendixes

Appendix 1: Modifications to the Rulebook

Section	Description of Change	Update Date
Entire rulebook	Moved rulebook to new brand template and made minor formatting changes Removed Computational and Reporting Precision section Added Exceptions section	June 2025
Entire rulebook	Updated methodology and index calculations to reflect the change in calculation agent from NYSE to Morningstar's in-house calculation platform, effective September 14, 2026	September 2026

About Morningstar Indexes

Morningstar Indexes was built to keep up with the evolving needs of investors—and to be a leading-edge advocate for them. Our rich heritage as a transparent, investor-focused leader in data and research uniquely equips us to support individuals, institutions, wealth managers, and advisors in navigating investment opportunities across major asset classes, styles, and strategies. From traditional benchmarks and unique IP-driven indexes to index design, calculation, and distribution services, our solutions span an investment landscape as diverse as investors themselves.

Morningstar Index Methodology Committee

The Morningstar Index Methodology Committee oversees all new index development, index methodology changes, and cessation of indexes for any indexes where Morningstar owns the intellectual property. This committee is also charged with ensuring that indexes align with Morningstar Research principles and values. The group comprises members of the index team with index research, product development, product management, client service, index implementation, and operation expertise who provide the first layer of governance over index design and methodology.

Morningstar Index Operations Committee

The Morningstar Index Operations Committee governs the processes, systems, and exception handling of the day-to-day management of all live indexes, including index rebalancing and reconstitution, restatements, market classification, and contingency management. The committee oversees the annual review of index methodology (as required by U.K. and EU benchmark regulations, or BMR), ensuring that methodologies remain fit for purpose and continue to achieve their stated investment objectives. The group comprises members of the index team with data, operations, corporate actions, product development, index launch, client service, and index management experience who provide the first layer of governance over index operations.

Morningstar Index Oversight Committee

The Morningstar Index Oversight Committee is responsible for the index oversight function as per the requirements of the U.K. and European BMR, providing independent oversight of all aspects of the governance of benchmark administration as required by the relevant BMR. Its remit extends to all calculation and administration-related business activities of Morningstar Indexes, including administration of Morningstar-owned benchmarks as well as client-owned benchmarks and index calculation. The oversight function is part of the organizational structure of Morningstar but is separate and independent from the index business, index management, and the other index committees.
